

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

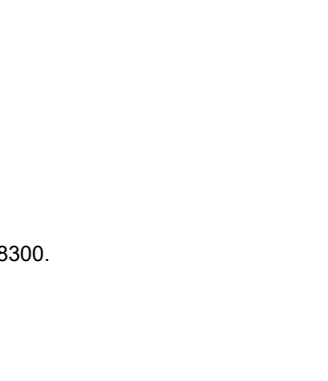

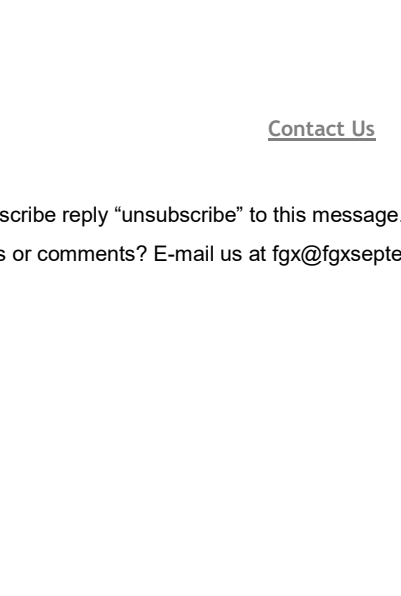

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

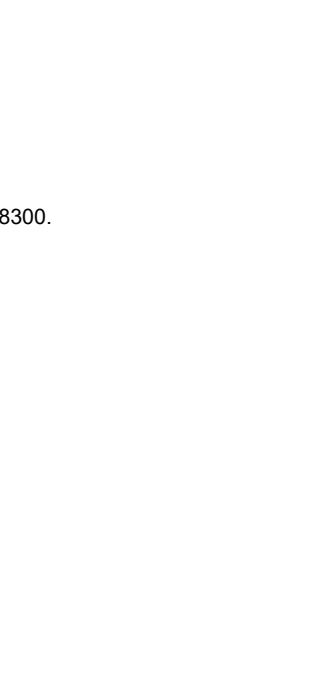

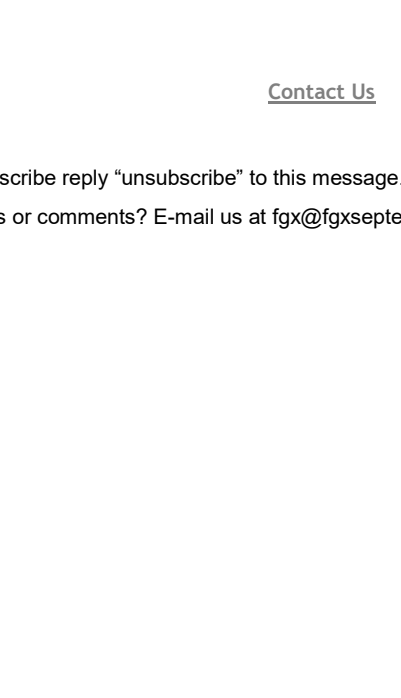

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

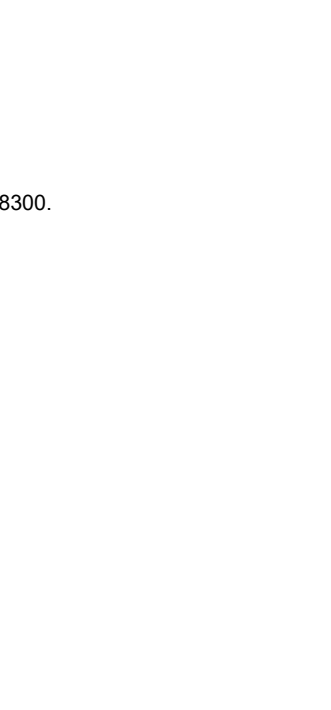

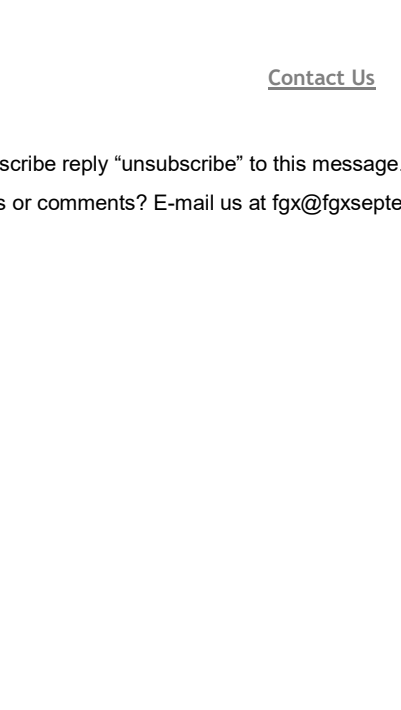

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

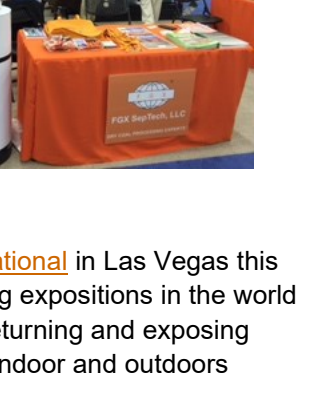

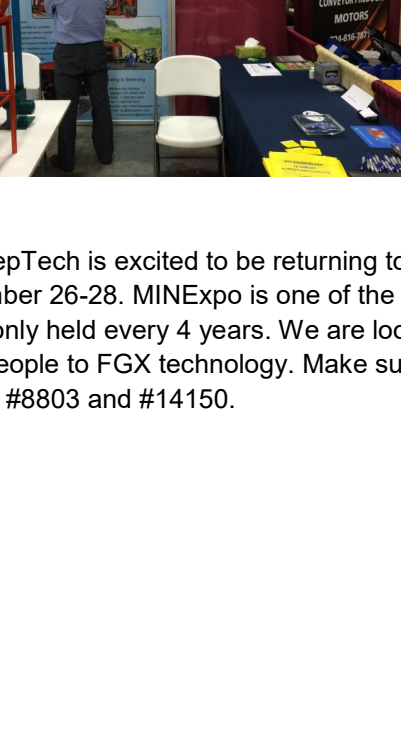

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

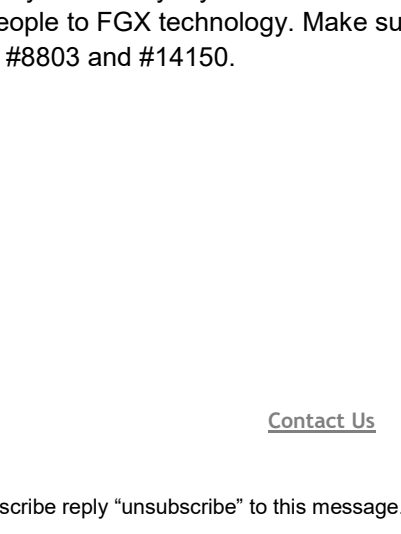

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

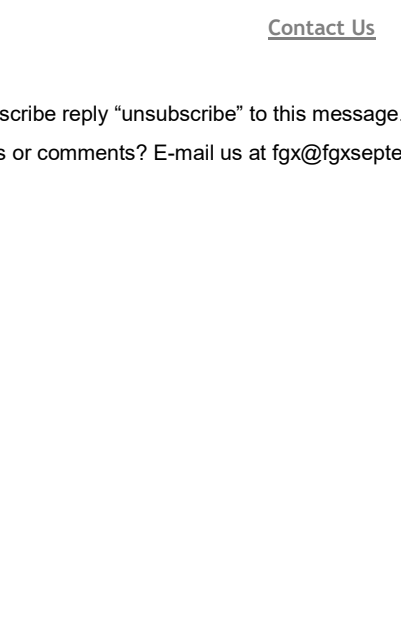

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

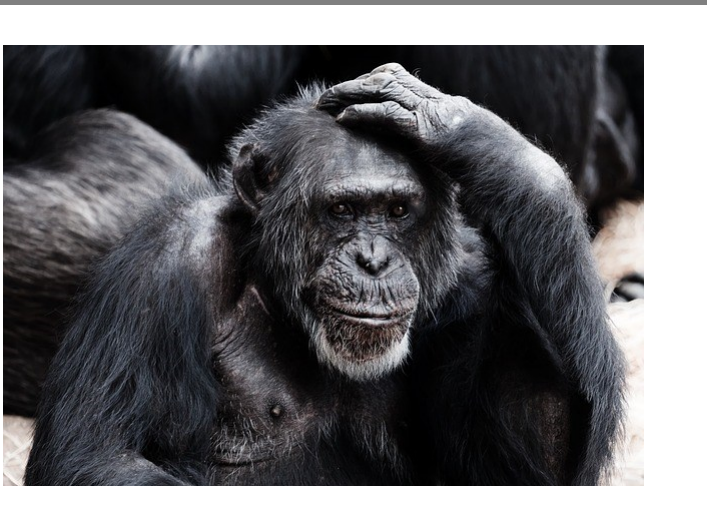

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

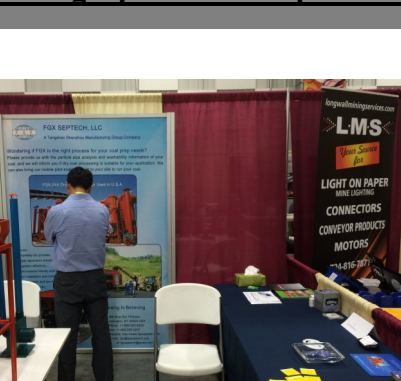

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

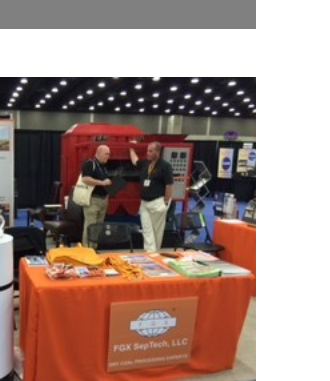

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

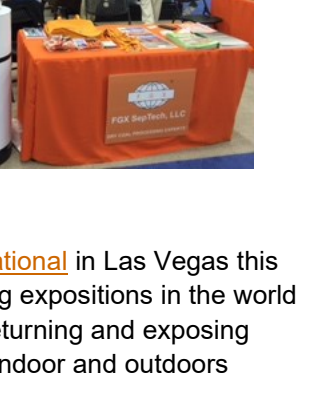

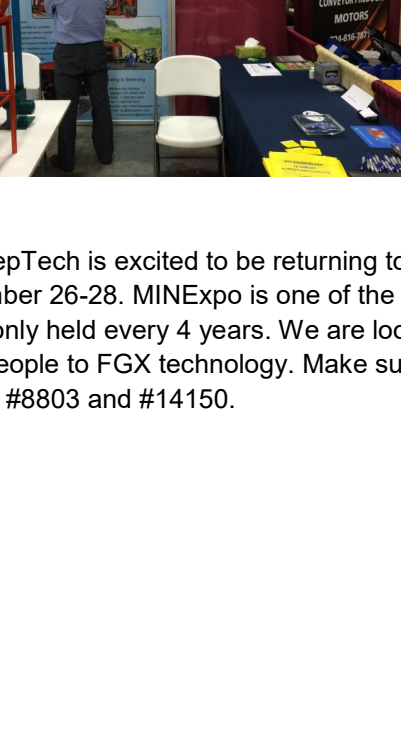

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

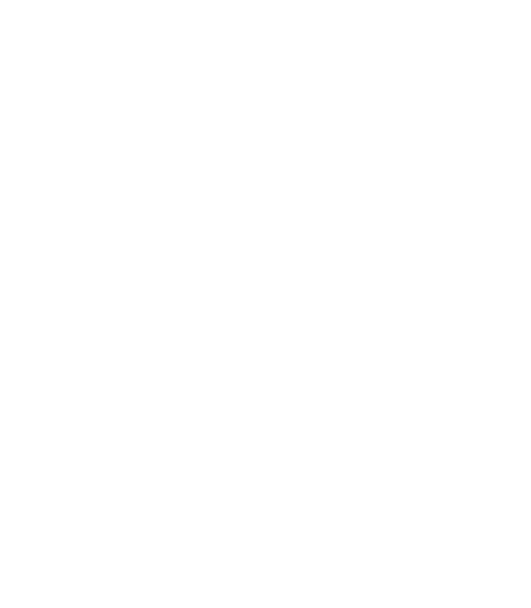

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

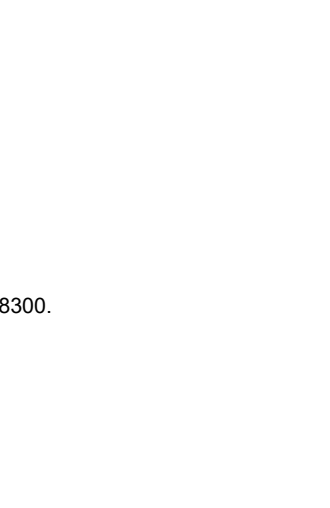

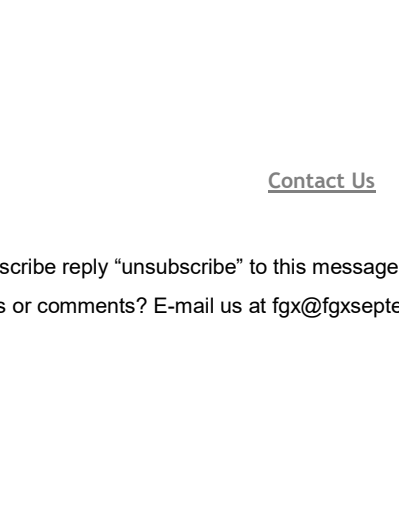

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

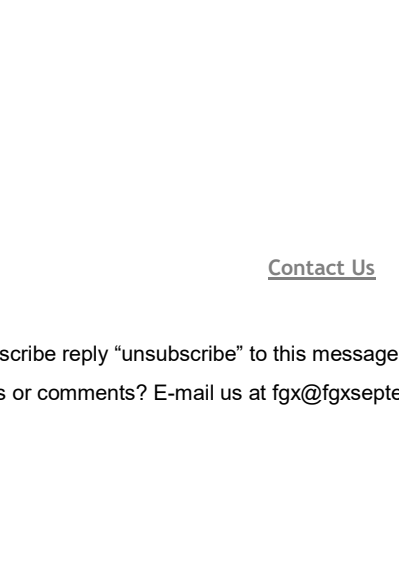

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

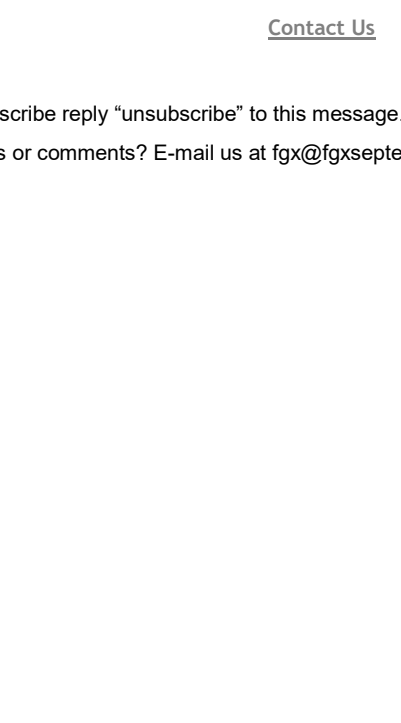

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

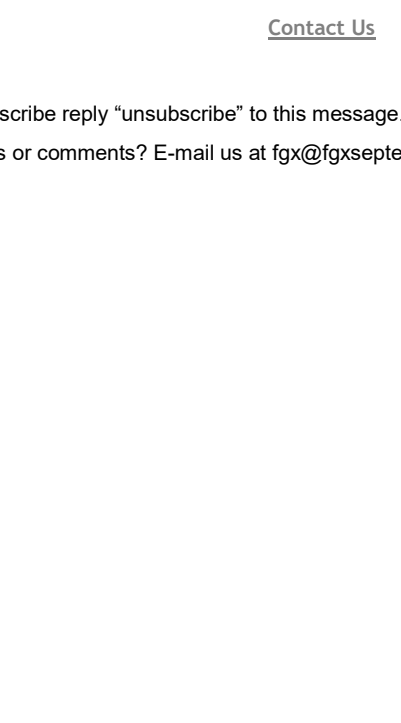

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

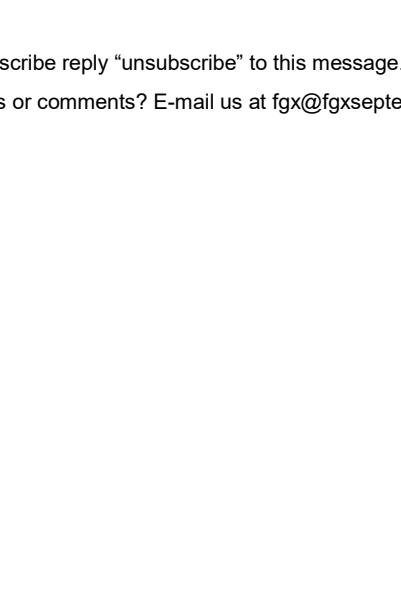

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

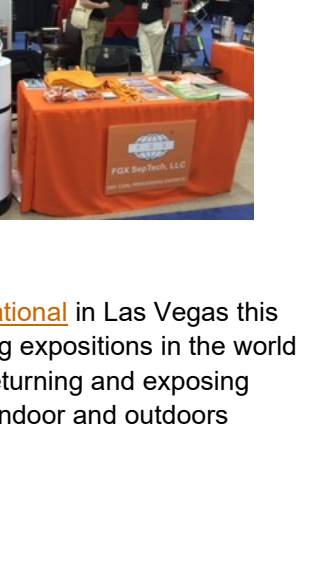

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Gearing Up for MINExpo 2016

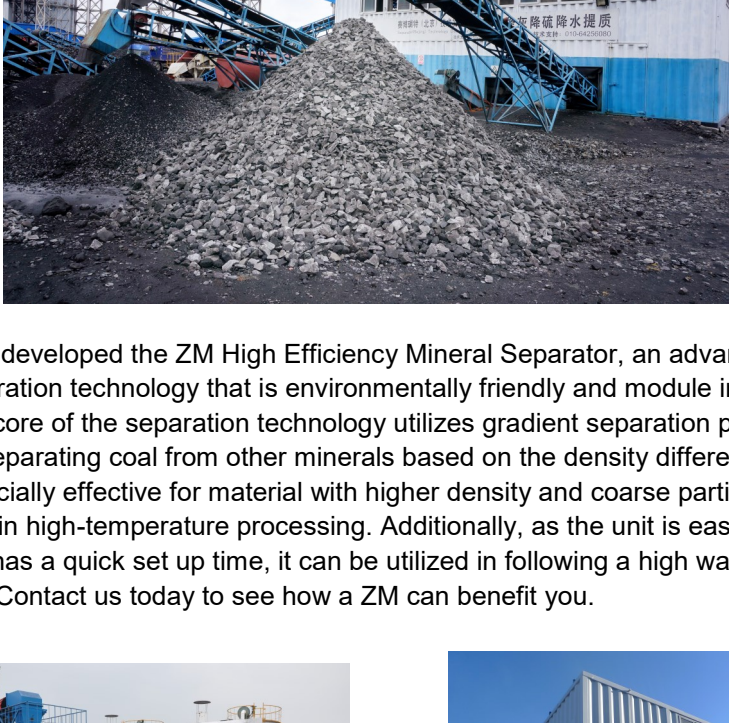

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

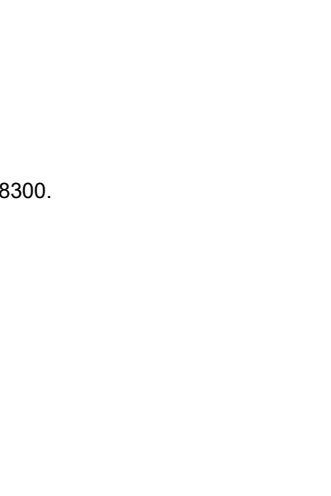

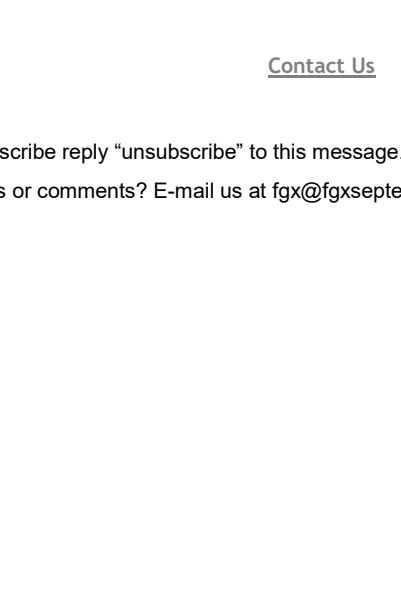

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

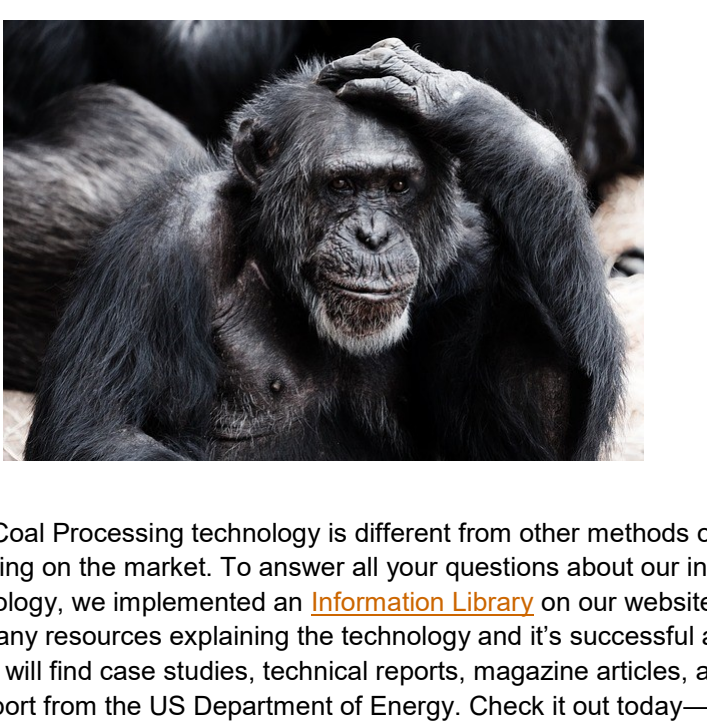

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

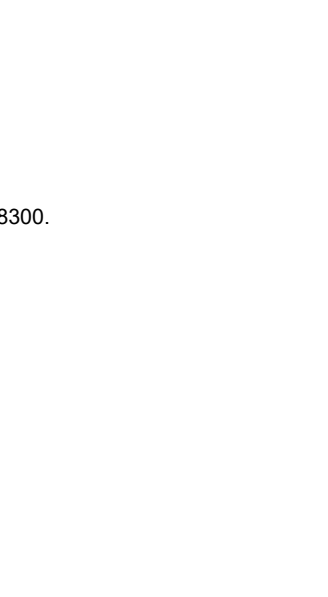

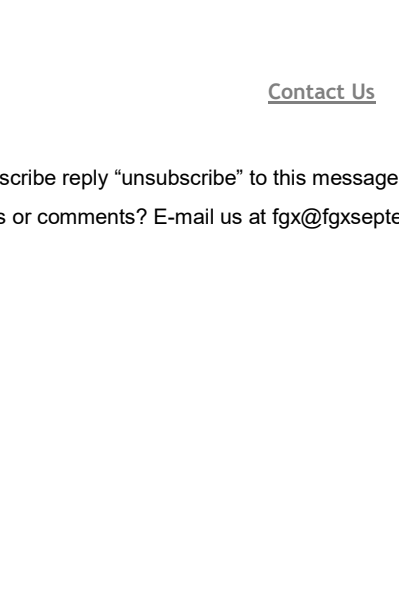

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

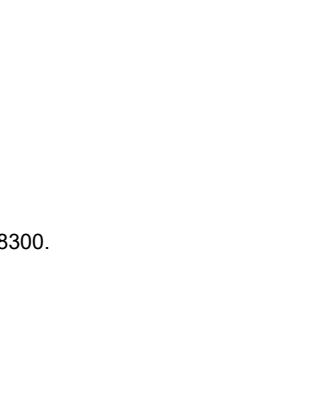

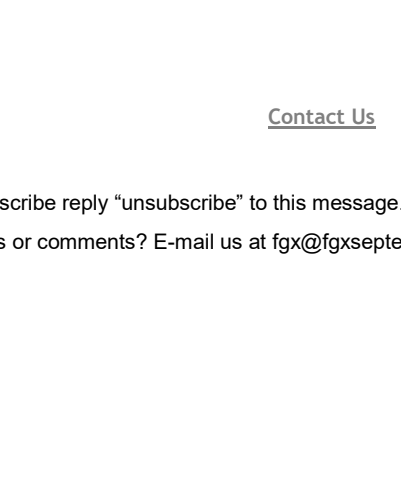

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

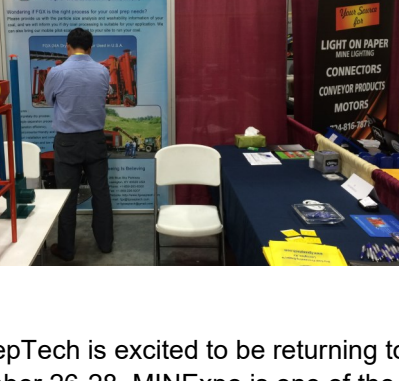

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

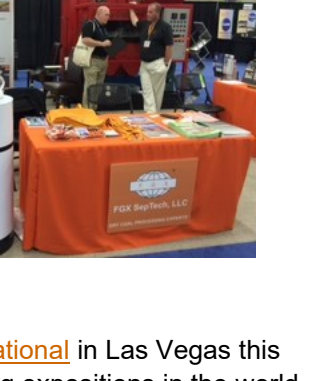

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

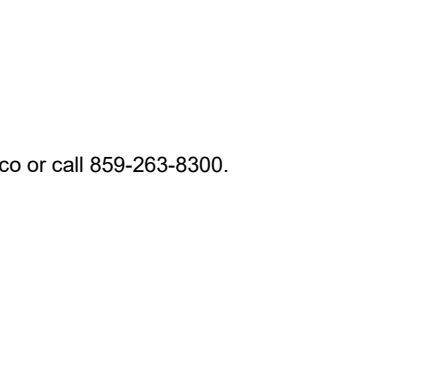

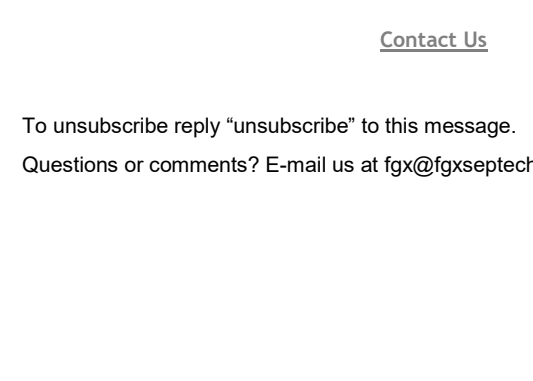

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

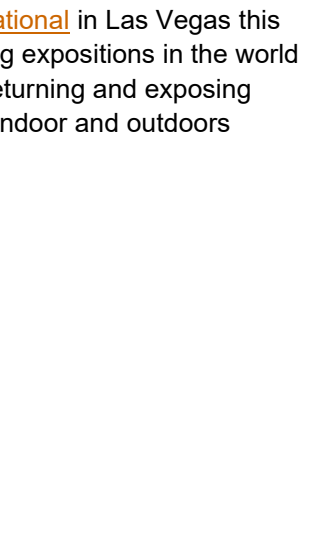

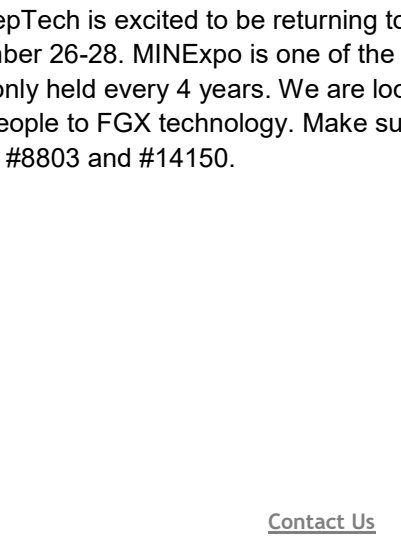

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

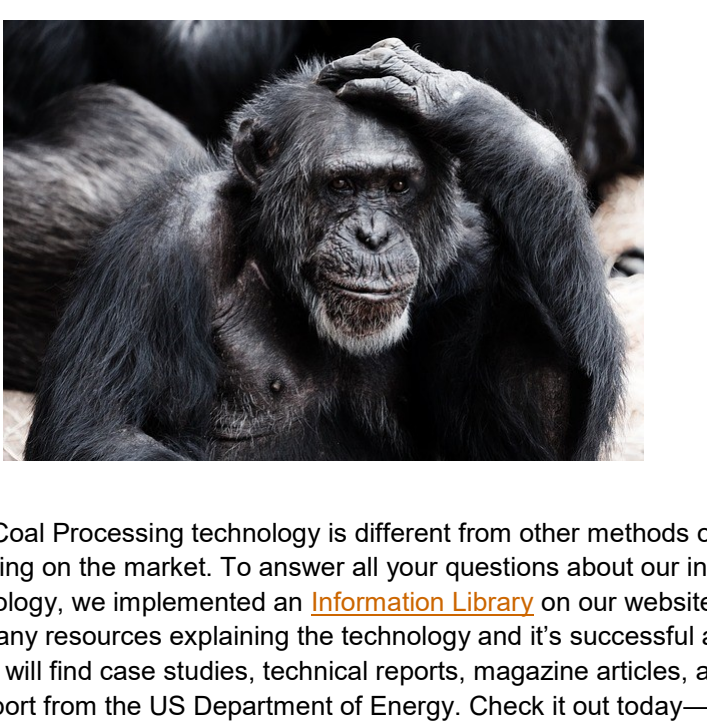

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

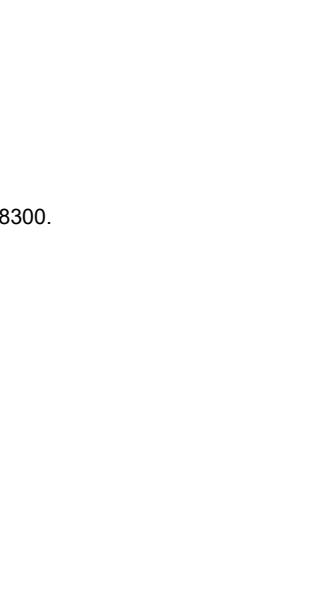

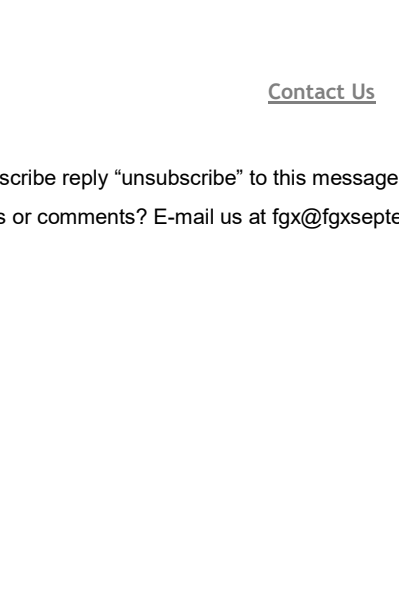

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

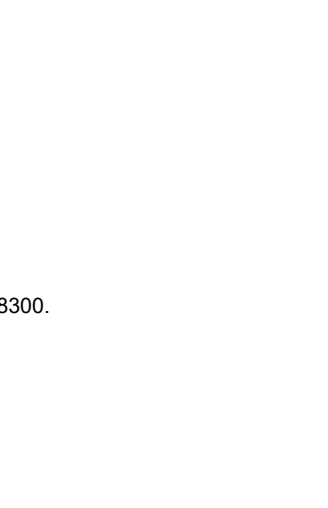

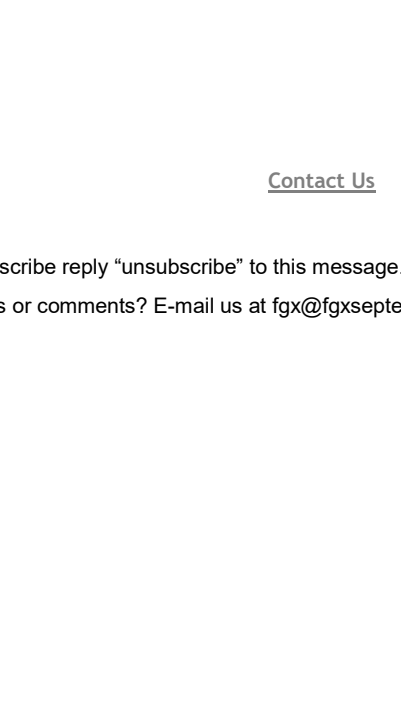

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX has tested coal from various regions in the US and around the world. We have uploaded videos of our tests to our [Youtube channel](#). Be sure to check it out and see FGX technology in action.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!

FGX Tests from Multiple Regions on YouTube

Above, the table distribution of an FGX plant is shown. You can see clearly how the reject, middlings, and clean coal are separated.

FGX Gearing Up for MINExpo 2016

FGX SepTech is excited to be returning to [MINExpo International](#) in Las Vegas this September 26-28. MINExpo is one of the largest coal mining expositions in the world and is only held every 4 years. We are looking forward to returning and exposing more people to FGX technology. Make sure to stop by our indoor and outdoors booths, #8803 and #14150.

FGX Unveils New ZM Modular Unit

FGX developed the ZM High Efficiency Mineral Separator, an advanced dry separation technology that is environmentally friendly and module integrated. The core of the separation technology utilizes gradient separation principles, for separating coal from other minerals based on the density differences. It is especially effective for material with higher density and coarse particles generated in high-temperature processing. Additionally, as the unit is easy to move and has a quick set up time, it can be utilized in following a high wall miner on site. Contact us today to see how a ZM can benefit you.

Curious About How FGX Technology Works?

FGX Dry Coal Processing technology is different from other methods of dry coal cleaning on the market. To answer all your questions about our innovative technology, we implemented an [Information Library](#) on our website that houses many resources explaining the technology and it's successful applications. You will find case studies, technical reports, magazine articles, and even a report from the US Department of Energy. Check it out today—your boss will thank you!

See FGX at the Illinois Mining Institute's Annual Meeting

FGX will be exhibiting at the [2016 Annual Meeting and Exposition for the Illinois Mining Institute](#) in Marion, IL August 23rd—24th. FGX technology is very successful in the Illinois Coal Basin so be sure to stop by and ask how can we can benefit you!
